MOVIE TRAILER WEBSITE

This Document helps you to clearly understand how to run the code so that the user can get the intended functionality out of the application.

- All the files are zipped into a zip folder. First unzip the zip folder into your working directory.

- Make sure you have three python files, an html file

- The python files contain the necessary codes and html file contains the application.

- Double click on the html file and you will be redirected to a web page which contains six movies. Click on the movie tile to watch the trailer.

- To run the application using python open the movie_trailer.py file and click on run module. One can use IDLE or any python environment to run the module. The media.py file contains the class and the fresh_tomatoes.py file contains the html server code.

- Enjoy the trailer!!!!!!!!!!!!!!!!!!!
